

The Mission

RCE is an innovative and sustainable floating transport system that utilises rivers, lakes and inland waterways to deliver an accessible cycling network. Through a rich ecosystem of experts, RCE is catalysing a green transport revolution that puts urban renewal, people and the planet at the heart of future cities.

European Cities face a plethora of social and environmental challenges – air pollution, congestion, sustainable urban renewal, flood risk, access to affordable housing and active transport options. RCE's disruptive business model offers a sustainable, adaptable framework designed to address these challenges and facilitate lasting improvements in green mobility and resilient water-based infrastructure

RCE Partnership with Bluet (Finland) 2026

River Cycleway Europe is pleased to announce that we have signed a Framework Collaboration Agreement with Bluet Oy Ltd, a Finnish floating construction specialist with an international track record across Europe, the UK, and Australia. The agreement establishes a clear division of responsibilities: RCE leads on concept development, above-water architecture, digital twin and smart data systems, clean energy and transport data integration, permitting and government liaison, and project commercialisation.

Bluet is the technical design and delivery partner for all floating infrastructure and modular structures, responsible for engineering, manufacturing, installation, and site supervision. Together the partnership provides end-to-end delivery capability for Ireland's first floating cycleway pilot.

River Cycleway Europe has completed due diligence and holds freedom to operate on its proprietary above-water design, supported by Pinsent Masons. With a strong first-to-market position and active participation in Enterprise Ireland's New Frontiers and the EIT Emerging Leaders programmes, RCE has developed a long-term leasing model that removes capital cost barriers for cities.

Target Market

Public transport infrastructure is typically funded by governments, regional authorities and local transport programs, positioning them as our primary market.

With cycling's €21.5b global value and role in reducing congestion, pollution, and health risks, cities like Galway, London, Dublin, Paris, Atlanta, Bordeaux and Glasgow have already expressed their interest in our solution.
